

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. APPLN. NO. 09/520,890
ATTORNEY DOCKET NO. Q55501

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (*Original*) A page window for a computer display screen, comprising:
- a base image including at least one base image element, wherein the base image element is at least one of a base control element, a base static element and a base status element for display on the page window; and
- at least one secondary image including at least one secondary image element, wherein the secondary image element is at least one of a secondary control element, a secondary static element and a secondary status element for display on the page window in conjunction with the base image.
2. (*Original*) The page window as claimed in claim 1, wherein the base image is derived from a plurality of base images.
3. (*Original*) The page window as claimed in claim 1, wherein the at least one secondary image comprises a plurality of secondary images.

4. (*Original*) A plurality of page windows for a computer controlled process, each page window comprising:

AI a base image, including at least one base image element, that forms the background for the plurality of page windows presented by the computer controlled process, wherein the base image element is at least one of a base control element, a base static element and a base status element; and

a plurality of secondary images, each secondary image including at least one secondary image element, wherein the secondary image element is at least one of a base control element, a base static element and a base status element,

wherein each of the plurality of page windows presented by the computer controlled process is formed by a merger of at least one of the plurality of secondary images with the base image.

5. (*Original*) The plurality of page windows for a computer controlled process as claimed in claim 4, wherein the at least one secondary image element modifies the at least one base image element of the base image.

6. (*Original*) The plurality of page windows as claimed in claim 4, wherein the base image is derived from a plurality of base images.

7. (*Original*) A page window for a computer controlled process, comprising:
a base image including at least one base image element responsive to either control or status stimuli; and
a plurality of secondary images, wherein at least one of the plurality of secondary images includes at least one secondary image element responsive to either control or status stimuli,
wherein the page window is formed by merger of the base image and one of the plurality of secondary images.

8. (*Original*) The page window for a computer controlled process as claimed in claim 7, wherein the base image further includes at least one base static element.

9. (*Original*) The page window for a computer controlled process as claimed in claim 7, wherein at least one of the plurality of secondary images further includes at least one secondary static element.

10. (*Original*) The page window for a computer controlled process as claimed in claim 7, wherein the at least one secondary image element responsive to control stimuli modifies the at least one base image element responsive to control stimuli.

11. (*Original*) The page window for a computer controlled process as claimed in claim 7, wherein the at least one secondary image element responsive to status stimuli modifies the at least one base image element responsive to status stimuli.

AI 12. (*Original*) The page window for a computer controlled process as claimed in claim 7, wherein the base image is derived from a plurality of base images.

13. (*Currently Amended*) A method for displaying page windows for a computer controlled process on a computer display screen, the method including:

[[a)] retrieving a base image composed of at least one base image element from storage;

[[b)] retrieving a secondary image composed of at least one secondary image element from storage;

[[c)] merging the retrieved base image with the retrieved secondary image to form a page window; and

[[d)] displaying the page window on a computer display screen.

14. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a base image ~~step (a)~~ further includes loading the retrieved base image into a display memory.

15. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a secondary image ~~step (b)~~ further includes determining which secondary image to retrieve from a plurality of secondary images.

A1 16. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a secondary image ~~step (b)~~ further includes storing the retrieved secondary image in display storage.

17. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a base image ~~step (a)~~ further includes retrieving a base image that includes at least one of a base control element, a base static element and a base status element.

18. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a secondary image ~~step (b)~~ further includes retrieving a secondary image that includes at least one of a secondary control element, a secondary static element and a secondary status element.

AMENDMENT UNDER 37 C.F.R. § 1.111
U.S. APPLN. NO. 09/520,890
ATTORNEY DOCKET NO. Q55501

AI 19. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein merging the retrieved base and secondary images ~~step (e)~~ further includes modifying the retrieved base image by adding the secondary image elements of the retrieved secondary image to the base image elements of the retrieved base image.

20. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein merging the retrieved base and secondary images ~~step (e)~~ further includes modifying the retrieved base image by blanking out selected base image elements of the retrieved base image according to the secondary image elements of the retrieved secondary image.

21. (*Currently Amended*) The method for displaying images for a computer controlled process on a computer display screen as claimed in claim 13, wherein retrieving a base image ~~step (a)~~ further includes deriving a final base image from a plurality of base images.

22. (*Currently Amended*) A computer system adapted to displaying page windows for a computer controlled process on a computer display screen, including:

a processor;

a memory including software instructions adapted to enable the computer system to perform the steps of:

[[a)] retrieving a base image composed of at least one base image element from storage;

[[b)] retrieving a secondary image composed of at least one secondary image element from storage;

[[c)] merging the retrieved base image with the retrieved secondary image, thereby creating a page window; and

[[d)] displaying the page window on a computer display screen.

23. (*Currently Amended*) The computer system adapted to displaying images for a computer controlled process as claimed in claim 22, wherein retrieving a base image ~~step (a)~~ further includes retrieving a base image that includes at least one of a base control element, a base static element and a base status element.

24. (*Currently Amended*) The computer system adapted to displaying page windows for a computer controlled process as claimed in claim 22, wherein retrieving a secondary image step ~~(b)~~ further includes retrieving a secondary image that includes at least one of a secondary control element, a secondary static element and a secondary status element.

25. (*Currently Amended*) The computer system adapted to displaying page windows for a computer controlled process as claimed in claim 22, wherein merging the retrieved base and secondary images step ~~(c)~~ further includes modifying the retrieved base image by adding the secondary image elements of the retrieved secondary image to the base image elements of the retrieved base image.

26. (*Currently Amended*) The computer system adapted to displaying page windows for a computer controlled process as claimed in claim 22, wherein merging the retrieved base and secondary images step ~~(c)~~ further includes modifying the retrieved base image by blanking out selected base image elements of the retrieved base image according to the secondary image elements of the retrieved secondary image.

27. (*Currently Amended*) The computer system adapted to displaying page windows for a computer controlled process as claimed in claim 22, wherein retrieving a base image ~~step (a)~~ further includes deriving a final base image at run-time from a plurality of base images prior to retrieval.

A1 28. (*Currently Amended*) A computer program product for enabling a computer to display page windows for a computer controlled process on a computer display screen, including:

software instructions for enabling the computer to perform predetermined operations, and a computer readable medium bearing the software instructions;

the predetermined operations including the steps of:

[[a)] retrieving a base image composed of at least one base image element from memory;

[[b)] retrieving a secondary image composed of at least one secondary image element from memory;

[[c)] merging the retrieved base image with the retrieved secondary image, thereby creating a page window; and

[[d)] displaying the page window on a computer display screen.

29. (*Currently Amended*) A method for presenting a page window for a computer controlled process, the method including:

[[a)] retrieving a base image including at least one base image element responsive to either control or status stimuli;

[[b)] retrieving a secondary image including at least one secondary image element responsive to either control or status stimuli;

[[c)] merging the base image and secondary image, wherein the secondary image modifies the base image, thereby creating a page window; and

[[d)] displaying the page window.

30. (*Currently Amended*) The method for presenting a page window for a computer controlled process as claimed in claim 29, wherein merging the base image and secondary image ~~step (c)~~ further includes modifying the retrieved base image by adding the at least one secondary image element of the retrieved secondary image to the at least one base image element of the retrieved base image.

31. (*Currently Amended*) The method for presenting a page window for a computer controlled process as claimed in claim 29, wherein merging the base image and secondary image ~~step (c)~~ further includes modifying the retrieved base image by blanking out the at least one base image element of the retrieved base image according to the at least one secondary image element of the retrieved secondary image.

32. (*Currently Amended*) The method for presenting a page window for a computer controlled process as claimed in claim 29, wherein retrieving a base image ~~step (a)~~ further includes deriving a final base image from a plurality of base images prior to retrieval.

33. (*Currently Amended*) A computer system adapted to presenting a page window for a computer controlled process, including:

A1 a processor;

a memory including software instructions adapted to enable the computer system to perform the steps of:

[[a)] retrieving a base image including at least one base image element responsive to either control or status stimuli;

[[b)] retrieving a secondary image including at least one secondary image element responsive to either control or status stimuli;

[[c)] merging the base image and secondary image, wherein the secondary image modifies the base image, thereby creating a page window; and

[[d)] displaying the page window.

34. (*Currently Amended*) The computer system adapted to presenting a page window for a computer controlled process as claimed in claim 33, wherein merging the base image and secondary image ~~step (e)~~ further includes modifying the retrieved base image by adding the at least one secondary image element of the retrieved secondary image to the at least one base image element of the retrieved base image.

A1 35. (*Currently Amended*) The computer system adapted to presenting a page window for a computer controlled process as claimed in claim 33, wherein merging the base image and secondary image ~~step (e)~~ further includes modifying the retrieved base image by blanking out the at least one base image element of the retrieved base image according to the at least one secondary image element of the retrieved secondary image.

36. (*Currently Amended*) The computer system adapted to presenting a page window for a computer controlled process as claimed in claim 33, wherein retrieving a base image ~~step (a)~~ further includes deriving a final base image from a plurality of base images prior to retrieval.

37. (*Currently Amended*) A computer program product for enabling a computer to present a page window for a computer controlled process, including:

software instructions for enabling the computer to perform predetermined operations, and a computer readable medium bearing the software instructions;

A1 the predetermined operations including the steps of:

[[a]] retrieving a base image including at least one base image element responsive to either control or status stimuli;

[[b]] retrieving a secondary image including at least one secondary image element responsive to either control or status stimuli;

[[c]] merging the base image and secondary image, wherein the secondary image modifies the base image and creates a page window; and

[[d]] displaying the page window.
